Brighten large areas prone to hyperpigmentation

Reduce the number of visible dark spots

melanopro peel system

**REDUCE THE APPEARANCE OF HYPERPIGMENTATION
IN LESS THAN 6 WEEKS**

dermalogica PRO

hyperpigmentation

There are several types of hyperpigmentation, with the common ones being melasma, sun spots, and post-inflammatory hyperpigmentation. Excess production of melanin is a common cause of hyperpigmentation.

melasma

is believed to be caused by hormonal changes and may develop during pregnancy. Areas of hyperpigmentation can appear on any area of the body, but they appear most commonly on the stomach and face.

sun spots

are related to excess sun exposure over time. Generally, they appear as spots on areas exposed to the sun, like the hands and face.

post-inflammatory hyperpigmentation

is a result of injury or inflammation to the skin. Acne is a common cause.

what is the melanopro peel system?

The Melanopro Peel System is a comprehensive skin care program to visibly reduce hyperpigmentation and skin tone irregularities. It is a 2-phase system. The first phase is done by a skin care professional in a skin center. The second phase is continued at home with prescribed products. Results will be seen in under 6 weeks.

what to expect with melanopro

- First, a masque is applied by a professional in a skin center. This masque will need to stay on between 4-7 hours, with the exact duration determined by your skin care professional after a skin analysis.
- You will be given proper instructions on the removal process by your skin therapist.
- 24 hours (or later) after you remove the masque, you will start using the prescribed home care products. You will keep using these until they are finished.
