

Treatment **Areas:**

Under eyes

Cheeks

Jaw line

Neck

PRP Treatment

PRP (**Platelet Rich Plasma**) is a minimally invasive Cosmetic Injectable Treatment that uses the client's own blood to bio-stimulate skin cells, resulting in tighter, firmer skin and overall rejuvenation.

PRP **Benefits:**

Skin Healing

PRP Treatments help to repair and restore damaged skin tissue, resulting in improved skin texture, elasticity, and the diminished appearance of scarring.

Boost Collagen & Elastin

PRP growth factors increase collagen and elastin, improving the health and appearance of the skin.

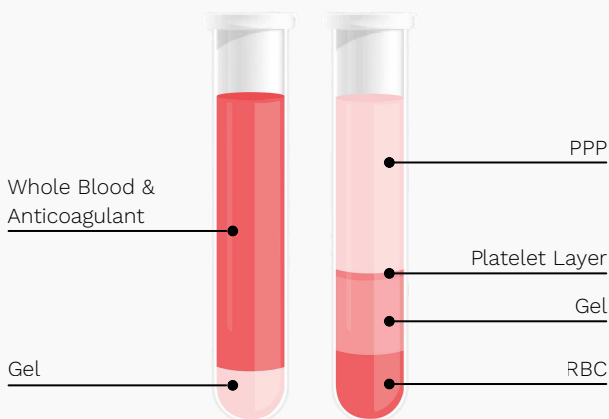

Skin Rejuvenation

Harnessing the natural healing and stimulating effects of your own plasma, PRP naturally thickens and firms the skin, which can lead to a fuller, more rejuvenated appearance.

How PRP **Works**

Once PRP is injected into the dermis of the skin, it releases growth factors to stimulate collagen production, increasing skin volume, firmness, and radiance.

Why Choose Laser Clinics Canada?

Medical Team

Our qualified Medical Team of Doctors and Registered Nurses work closely with the Laser Clinics MAC to remain at the forefront of aesthetics innovations, safety standards, and products.

Technology

Using market-leading PRP treatment equipment, we produce high-quality results that embrace and enhance natural beauty.

Paired Treatments

PRP works well in combination with laser and light therapy, microneedling, and other injectable treatments to provide an acceleration of overall improvement to skin appearance over time.
