

(ARI) Screening

- I. Do you have new/worse cough or shortness of breath?
- II. Are you feeling feverish, or have had shakes or chills in the last 24 hours?

If temperature $>38^{\circ}\text{C}$ (100°F), initiate droplet precautions, including N95 respirator and notify supervisor.

**To minimize the spread of
respiratory illness remember:**

Wash your hands with soap and warm water frequently, use alcohol hand rubs, use coughing etiquette and stay home if you are sick.

Healthcare workers should stay home until they are afebrile and feeling better.
